METRICS REPORT CARDS

Improving and using the data to accelerate progress to end preventable maternal and newborn deaths and stillbirths
Every Newborn Action Plan

The Every Newborn Action Plan (ENAP) is based on evidence published in The Lancet Every Newborn series and is in support of the United Nations Secretary-General’s Every Woman Every Child movement. Following consultations with member states and organizations, ENAP was launched in June 2014. The ENAP aims to support countries in reaching the Sustainable Development Goal (SDG) target of fewer than 12 newborn deaths per 1000 live births, and ENAP target of fewer than 12 stillbirths per 1,000 total births by 2030. The Plan was supported by a 2014 World Health Assembly resolution adopted to encourage government leaders, policymakers and program managers to end preventable newborn deaths and stillbirths. It is also closely linked to the Ending Preventable Maternal Mortality plan and supports key Sustainable Development Goals for health.

Metrics work in support of Every Newborn

The ENAP Metrics working group is co-chaired by the World Health Organisation (WHO) and London School of Hygiene & Tropical Medicine (LSHTM), and has a mandate to work with all partners involved with ENAP to ensure the milestones in the Action Plan related to metrics are met on time, and tools and learning are shared and available in open access for widespread use in countries.

This series of metrics report cards summarises the status of the data, including what can be used now, an ambitious approach to improving the data, and how those interested can find out more.
